

FACT SHEET

ROAD SPEED LIMITER

ARSL Additional, temporary road speed limiter control (switch in dashboard)

Additional road speed limiter

The additional road speed limiter allows the driver to define a temporary speed limit for the truck. This is a useful feature when entering a Low speed area.

The driver activates the additional speed limiter by pressing the switch in the instrument panel and the current speed becomes the limit. The speed is regulated by using the steering wheel buttons.

Note! When going downhill, the truck may free roll faster than the speed limit.

SAFETY

- Enhances Safe Driving.
- Easier for the driver to keep to local speed limits.

Symbol on button for additional speed limiter.
