

FACT SHEET

EXTRA LED SPOT LAMPS

Extra spot lamps on the sides of the sign box

To provide excellent visibility in dark conditions, the high and extra-high sleeper cabs can be equipped with one extra spot lamp on each side of the roof cab sign.

The spot lamps come with LED lights and are offered in two light intensities — 450 lumens (ASL-RF2) or 900 lumens (ASL-RF2B).

The ASL-RF2 spot lamps are approved for use within the whole of the EU and are included in the whole vehicle type approval (WVTA). The high-intensity ASL-RF2B spot lamps are legal for use only in the Nordic countries.

The spot lamps are turned on with a switch in the front shelf above the driver and are controlled together with the main beam through the light stalk at the steering wheel.

Sales variants

ASL-RF2 Two LED spot lamps in sign box

ASL-RF2B Two high-intensity LED spot lamps in sign box

SAFETY

- High-positioned spot lamps are a very efficient complement to the standard headlamps.

ENERGY EFFICIENCY

- The spot lamps have no negative impact on the cab aerodynamics.
