

FACT SHEET

Audio system

The audio controls are located on the right side of the steering wheel.

Volvo audio systems

Volvo audio systems are developed and optimised specifically for Volvo trucks. They are integrated into the vehicle, which means that several functions can be linked together in an easy to operate and safe way. Audio system information is presented in the dashboard information display, a monochrome display for basic version and a 7" colour display for the high-end version.

Sales variants

Audio Preparation Kit Complete preparation for aftermarket audio system installation in overhead shelf DIN slot for FH and in dashboard for FM/FMX. With speakers in dashboard and doors, 12 V power supply and FM/AM antenna, not using Volvo controls and display.

Audio Basic Audio system with basic functions. Features a radio and CD player. Steering wheel controls.

High Power Audio System Audio system with Bluetooth including streaming functionality. USB and line inputs (AUX) which makes it possible to play music via USB and other external audio sources.

The audio interface in the secondary information display.

FEATURES AND BENEFITS

- Offers high audio quality.
- Developed specially for Volvo.
- Steering wheel controls.
- Possibility of:
 - Playing CD
 - Playing WAV/WMA/MP3 files
 - Bluetooth
 - USB socket
 - Line input (AUX)
 - Can be controlled via the luxury sleeper control panel (SLCP-LUX)

FACT SHEET

Audio system

Different audio formats

Offering support for CD-R and CD-RW, the audio system can play recordable CDs. Audio variants that offer support for WAV/WMA/MP3 files can also play these file formats.

Bluetooth

Standard for wireless communication which can be used between the phone and the vehicle's audio system to provide a handsfree function that is operated via the steering wheel controls

Control of phonebook is possible. The incoming phone number is displayed in the driver information and audio system displays. The phone's microphone is fitted in the front shelf and sound is relayed via the audio system's loudspeakers.

Bluetooth audio streaming with streaming high quality stereo over Bluetooth. The status of the music source (playing, stopped, etc.), information on the track itself (artist, track name, etc.) is shown in the display.

Voice control

Voice control (utilizing the phone built in voice control feature).

One push on the push to talk button activates sound path to phone. All "voice control" features are executed in the connected phone.

Line input

3.5 mm stereo line input makes it possible to connect an external sound source, e.g. an MP3 player or a similar device.

USB

Makes it possible to connect a USB memory stick or a smartphone that can be operated by the audio system's regular controls, e.g. the steering wheel controls.

External memory

Memory details: size up to 2 TB.

Control from resting compartment

The Volvo Audio system can be controlled remotely from the rear wall Luxury sleeper control panel (SLCP-LUX).

RDS - Radio Data System

Switches automatically to the strongest radio transmitter for the selected station along your route and also shows programme information and interrupts regular programs whenever traffic information is transmitted.
