

FACT SHEET

WARNING LAMPS

Warning lamps

Warning lamps provide an excellent all-round warning thanks to a number of different optional positions.

They include amber beacons that are of LED type and are impact-resistant. They are equipped with lights and lenses with a very long service life. There are no movable parts in the LED beacons.

The beacons have rotating light according to UNECE R65.

Sales variants

BEACONA2 Two amber LED beacons on cab front roof

BEACON-P Preparation kit for roof beacons

SAFETY

- A wide range of warning lamps positions makes it easy to choose a safe solution for every purpose.

UPTIME

- LED beacons with low power consumption and a very long service life.
- Factory installation reduces lead time, ensures high quality and minimizes the risk of water leakage into the cab.

Design of LED beacon.

FACT SHEET

WARNING LAMPS

BEACONA2 — Two amber LED beacons on cab front roof

The set comes with two LED beacons, mounted at the front of the cab roof and the cables have a water-proof rubber grommet. Also relay and wiring harness to a switch position, above the windscreen. The complete installation is included and ready to be used.

BEACON-P — Preparation kit for roof beacons

The preparation kit for roof beacons consists of two cable pass-throughs in the cab roof with plastic protective caps, pre-installed wiring harnesses to the beacons on the roof and a relay. The switch is not included; however, the wiring harness is waiting at the dashboard and on the roof.

The preparation kit results in a simple and secure after-mounting.
