

FACT SHEET

BUMPER SPOILER

BUMP-SP Front bumper spoiler

**Front bumper spoiler**

The spoiler is fitted below the bumper where it works as an air deflector and contributes to reduced drag. It is available together with the plastic bumper and optimised for use on chassis height high (CHH-HIGH) and chassis height medium (CHH-MED).

For most trucks, an additional flexible rubber extension is also added below the bumper spoiler. The addition of this rubber extension is determined by a calculation of ground clearance for each individual truck.

Depending on the exterior finish level, the front spoiler is delivered either in Lightning grey or painted in the cab colour. The rubber extension is always black.

The weight of the spoiler is approximately 2 kg.

**ENERGY EFFICIENCY**

- Contributes to reduced air resistance and improved energy efficiency.
