

FACT SHEET

CLUTCH FOR AIR COMPRESSOR

CLU-AIRC Air compressor clutch with automatic declutching when not needed, to save fuel

Clutchable air compressor

The clutchable air compressor has an automatically operated clutch that engages or disengages the air compressor. The air compressor is only engaged when needed, which lowers the fuel consumption.

The clutchable air compressor is installed on the left-hand side of the engine and is directly driven by the engine timing mechanism.

The clutchable air compressor is of a different design than the ordinary air compressor, thus the latter cannot be retrofitted with a clutch.

ENERGY EFFICIENCY

- The air compressor is engaged only when needed, which lowers the fuel consumption.
