

## FACT SHEET

# CURTAIN

Example of curtain installation for windscreen and side windows curtain. Note that the colour pattern can differ between Volvo FM and Volvo FH.

Example of curtain installation for curtains between seats and beds. Note that the colour pattern can differ between Volvo FM and Volvo FH.

## Curtains

Curtains for cabs are available in two different variants: CURT-WIN and CURT-WB. For Volvo FH CURT-WIN is standard.

CURT-WIN contains a curtain for windscreen and side windows. This is a combined curtain for both windows, thus without joints, which runs in a rail in the roof. CURT-WIN is available for all cabs.

CURT-WB includes the curtain in CURT-WIN, but also curtains between driving and resting area (separate curtains that hang on each side). The curtains run in a rail in the roof and meet in the middle of the bed. CURT-WB is available for sleeper and Globetrotter cabs, with exception for low sleeper cabs.

The curtains' colour pattern is designed to harmonize with the different available types of interior levels for the cab.

Curtain design, colour and pattern differ between Volvo FH and Volvo FM. For the Volvo FH, the curtain is made of a denser fabric, which gives less light transmission to be suitable for overnight stays and resting also during daytime.

## Sales variants

- CURT-WIN** Combined curtain for windscreen and side windows
- CURT-WB** Combined curtain for windscreen and side windows and curtains between seats and rear bed/beds
- UCURTAIN** Without curtain

## FEATURES AND BENEFITS

- Sleeping in darkness normally contributes to better sleep.
- Reduces the possibility of looking into the cab.
- Adds more comfort to the interior.
