

FACT SHEET

VERTICAL EXHAUST TOP PIPE MATERIAL

The vertical exhaust pipe is fitted along the rear cab wall on the right-hand side, with the exhaust outlet positioned above the cab roof. The vertical exhaust pipe has two parts—a top part and a lower part.

With variant EXST-SSP, the top part is made of bright polished stainless steel. With variant EXST-ST, the top part is made of aluminised steel.

The lower part of the vertical exhaust pipe is always in aluminised steel.

The material on variant EXST-SSP matches the material on the exhaust heat shield, so when they get assembled together, the top pipe of the vertical exhaust and heat shield have a homogeneous appearance.

DRIVER APPEAL

- Enhances the visual appearance of the truck.

UPTIME

- High-quality materials ensure robust performance and reliability.
