

FACT SHEET

GUARD UNDER FRONT

GUARD-EH Guard plate for cooling pipes and oil sump

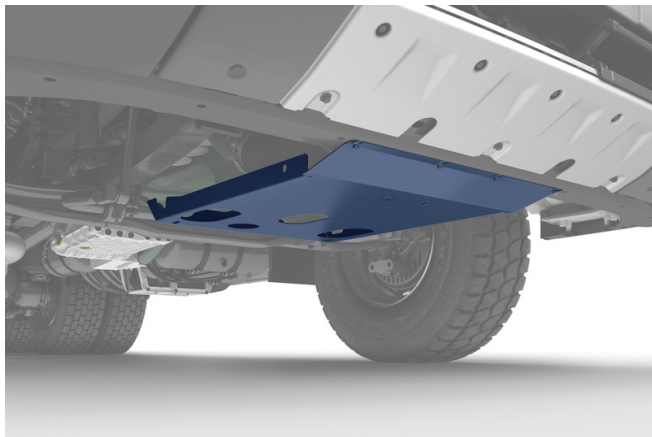

Engine oil pan guard

A sturdy guard plate made of 3 mm thick steel protects the lower part of the intercooler installation and the engine.

The guard plate for engine and cooling pipes is adapted and available for both front leaf and air suspension trucks.

The oil pan guard offers good protection for the oil sump and covers the area from the bumper to the front axle. It is angled at the rear edge, which prevents stones, gravel, mud and sand from reaching the area when reversing. This results in less damage and increased durability.

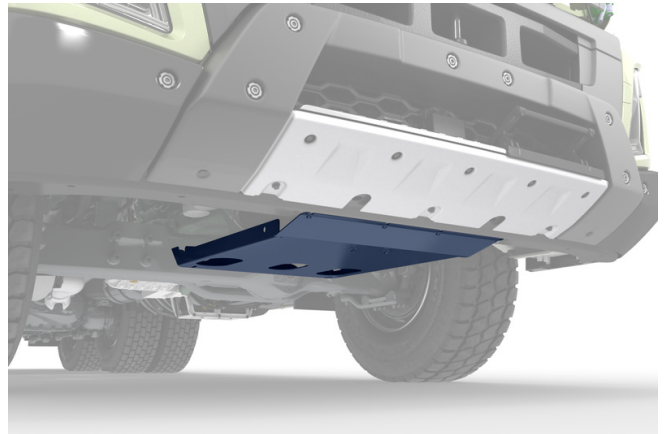

GUARD-EH, non driving front axle.

UPTIME

- Protects the oil sump and intercooler hoses from damage.
- Sturdy and durable.
- Reduces dust circulated by the airflow of the cooling fan when standing still.

GUARD-EH, driving front axle
