IMMOBILIZER

IMMOBIL Immobilizer

Immobilizer

With the Volvo immobilizer, it is only possible to start the engine with the correct key, thus enhancing protection against theft. The immobilizer secures the truck using a chip with an electronic code integrated in the key. Whenever the ignition is switched on, the immobilizer runs a check in order to unlock the engine.

The immobilizer can be combined with the Volvo anti-theft system for more complete protection of the truck.

SECURITY

- Enhanced security at the roadside.
- High security from encrypted communication and vehicle integrity checks.
