

FACT SHEET

ENGINE IDLE SHUTDOWN TIME

ENERGY EFFICIENCY

- Improved fuel economy.

ENVIRONMENT

- Less CO₂ emission leads to a lesser impact on the environment.

Sales variants

- | | |
|---------------|----------------------------------|
| ISD01 | Idle shutdown after 1 minute. |
| ISD2.5 | Idle shutdown after 2.5 minutes. |

Engine idle shutdown time

The engine is set to shut down after 1 minute, for ISD01, or 2.5 minutes, for ISD2.5, of idling to save fuel and reduce emissions.

The engine will perform a shutdown under the following conditions:

- The engine must be running at idle speed.
- The parking brake must be applied.
- When there is no usage of the brake pedal nor accelerator pedal.
- In this situation, a display warning and a warning sound will be initiated 30 seconds before shut-down. After the engine shuts down, the display warning will continue to be shown until the engine is restarted.

It is possible for the driver to override the idle shutdown by pressing the brake or the accelerator pedal when the signal is given. The preset for idling shut-down can be changed by a Volvo workshop.
