EXTERNAL MIRRORS

MIRCFPCS Rear-view and wide-angle mirrors, passenger corner camera

Electrically heated and operated rear-view mirrors with a wide-angle mirror on both sides of the cab and a close-view mirror on the passenger side. A passenger corner camera* in the mirror bracket on the passenger side.

Not only do the external mirrors provide excellent rearward visibility, but thanks to the ultra-slim design of the mirror casing, the visibility ahead is also great.

Electric heating of the main and wide-angle mirrors on both the driver and the passenger side improves safety and makes it easier for the driver when the temperature drops. Electric operation of the main mirrors makes adjustment, both vertically and horizontally, fast and easy. The close-view mirror on the passenger side is not electrically heated or operated.

The view of the area on the passenger side of the cab is normally very restricted from the driver's seat. The passenger door limits the view and the area cannot be seen fully through the door window or the mirrors. To address this problem, a passenger corner camera is installed in the lower housing of the mirror bracket at the passenger side. It communicates with the side display in the truck, and gives the driver a clear picture of this blind spot area.

* Requires side display.

SAFETY

- The slim design gives excellent visibility to the rear, ahead and close to the cab.
- Good view of the blind spot near the cab on the passenger side.

DRIVER APPEAL

- Easy and exact electrical adjustment of the main mirrors.
- No need for scraping ice or wiping fog with electrically heated mirrors.

SPECIFICATION

Passenger corner camera.....	Mekra Lang GmbH
Camera view angle, horizontal.....	160°
Camera view angle, vertical.....	120°
