

FACT SHEET

EXTERNAL MIRRORS

**Rear-view with heating and optional electrical operation**

Two variants are available as rear-view mirrors; MIRSTD with heating and MIRCOMF with heating and electrical operation.

The rear-view mirrors have a wide-angle section on both sides, as well as a kerb observation mirror on the passenger side.

The main rear-view mirrors have a dirt-repellent and aerodynamic design. The sturdy attachments on the doors prevent vibration, leading to a steady image in the mirror glass.

The kerb observation mirror shows the area around the front wheel on the passenger side and the mirrors' total coverage area meets the legislated requirements for angle of vision.

The main mirrors and the wide-angle section feature electrical heating for defrosting during cold conditions.

Sales variants

MIRSTD Manually operated rear-view & wide-angle mirrors (both sides), kerb observation mirror

MIRCOMF Electrically operated rear-view & wide-angle mirrors (both sides), kerb observation mirror

**SAFETY**

- Excellent all-round visibility with both wide-angle mirrors and kerb observation mirror.

**DRIVER APPEAL**

- Easy and exact electrical adjustment of the main mirrors (MIRCOMF).
- No need for scraping ice or wiping fog with electrically heated mirrors.
