

FACT SHEET

RAIN SENSOR

RSENS-W Wipers rain sensor

Rain sensor for windscreen wipers

With a rain sensor, the driver can focus on the road while the windscreen wipers operate automatically. The sensor identifies rain on the windscreen and is activated when needed, which increases safety.

The sensitivity of the sensor can be set with the rotary control on the wiper stalk, for good visibility. The sensor functions are activated with the infrared light-emitting diode aimed at the windscreen.

DRIVER APPEAL

- The driver can focus on the road.
- Adjustable sensitivity.

SAFETY

- Automatic sensors provide visibility, which contributes to a better safety.
