

FACT SHEET

## STEERING WHEEL ADJUSTMENT

The steering wheel adjustment range offers everybody an optimal driving position.

### DRIVER APPEAL

- Flexible adjustment of the driving position gives increased comfort and safety.
- The foot pedal makes it possible to adjust the steering wheel with both hands, to obtain the optimal driving position.
- The steering wheel can be folded up close to the instrument panel, to facilitate entry and exit from the cab.
- The neck tilt function provides an extended range for adjusting the steering wheel angle, enhancing the overall driving comfort.

### Steering wheel adjustment

The flexible steering wheel adjustment facilitates achieving the optimal driving position for each driver. Additionally, for convenient cab entry and exit, the steering wheel can be folded up close against the instrument panel.

Two variants of steering wheel adjustment are offered: with or without neck tilt. The neck tilt variant (STGW-AD2) offers even greater adjustment of the steering wheel angle. For example, the steering wheel can be set in a more vertical position.

For all adjustments, the steering wheel can be released and locked easily using a foot pedal.

#### Sales variants

**STGW-ADJ** Manually adjustable steering wheel

**STGW-AD2** Manually adjustable steering wheel with neck tilt
